

Step by Step: From the Headlines to the GED® Science Classroom

A Workshop by GED Testing Service®

Session Objectives

- Explore science headlines in the news
- Connect real-world science to GED® science themes
- Identify strategies and activities to build scientific inquiry skills
- Share resources

GEDtesting.com • GED.com

What has science done for you lately?

Scientific knowledge helps us make decisions that affect our lives every day.

3 GEDtestingservice.com • GED.com

Ever think about . . .

- What causes gravity?
- How tectonic plates move around on Earth's surface?
- How does the human brain store memories?
- How do water molecules interact with each other?

What does this have to do with the GED® Science Test?

- Content topics describe key concepts widely taught in high school courses
- Content is relevant to lives of students
- Topics are generally familiar to students
- Content pulled from areas of interest drawn from the headlines

7

GEDtestingservice.com • GED.com

Taking the Headlines and Creating an Inquiry-Based Lesson

8

GEDtestingservice.com • GED.com

How Do We Begin?

- Look at focusing themes
- Find a headline of interest
- Think about how to engage students through inquiry
- Identify resources and create your lesson!

9

GEDtestingservice.com • GED.com

Focusing Themes

		Science Content Topics		
		Life Science (40%)	Physical Science (40%)	Earth & Space Science (20%)
Focusing Themes	Human Health and Living Systems	• Human body and health • Organization of life • Molecular basis for heredity • Evolution	• Chemical properties and reactions related to human systems	• Interactions between Earth's systems and living things
	Energy and Related Systems	• Relationships between life functions and energy intake • Energy flows in ecologic networks (ecosystems)	• Conservation, transformation, and flow of energy • Work, motion, and forces	• Earth and its system components • Structure and organization of the cosmos

10

Teaching Through Inquiry – 5Es

11 GEDtesting-service.com • GED.com

Five Features of Science Inquiry

We want our learners to:

- Engage in discourse through use of scientifically-oriented **Questions**
- Use **Evidence** in responding to questions
- Formulate **Explanations** from **Evidence**
- Connect **Explanations** to **Scientific Knowledge** and **Real-World Events**
- Communicate and justify **Explanations**

12 GEDtesting-service.com • GED.com

From the Headlines to the Classroom

**It's a bird;
it's a plane;
No—it's Superbug!**

13 GEDtestingservice.com • GED.com

Setting the Stage

- Have you ever taken an antibiotic?
- How and when should antibiotics be used?
- Who was Alexander Fleming?
- What are bacteria?
- What have you heard about super-bugs?

14 GEDtestingservice.com • GED.com

Engage with a Video

Superbugs Are Here!

- In the USA, over 2 million people each year become infected with bacteria that are resistant to antibiotics
- Last year, over 23,000 people died as a direct result of antibiotic-resistant infections
- By 2050, it is projected that antibiotic resistant infections will cause more deaths annually than cancer – over 10 million people worldwide or one person every three seconds.

GEDtestingservice.com • GED.com

Explore – What's the difference?

<http://ed.ted.com/on/q41jt6vp#finally>

16 GEDtestingservice.com • GED.com

Explore - Bacteria/Virus – What's the Difference?

- What are bacteria?
- What are viruses? Is there a difference?
- What can we do to fight bacteria?
- How come sometimes medicine we take for infections don't work?
- What is a superbug?

17 GEDtestingservice.com • GED.com

Explore – Use a Venn Diagram

18 GEDtestingservice.com • GED.com

Explain - Who was Alexander Fleming?

Penicillin – Wonder drug or not?

19 GEDtestingservice.com • GED.com

Feeling Sick?

Do you ever wonder what is causing your illness?

It could be a virus or a bacteria... and the differences are important.

Virus vs. Bacteria

Viruses are particles that invade your body's cells. Viruses contain genetic material (DNA or RNA) and a protein coat. Viruses take many shapes and are much smaller than bacteria.

Bacteria are one-celled organisms that take several shapes - spheres, rods, spirals. They are found everywhere - in food, dirt, and on our bodies. Bacteria can live outside our body's cells. Most bacteria are good - such as those that help with digestion, but some can cause infections.

Viruses cause diseases such as the common cold, many sinus infections, acute bronchitis and most sore throats. The body fights against viral infections by producing a fever or inflammation.

Bacteria cause infections such as strep throat by invading the body's cells. The body fights against bacteria by producing a fever or inflammation. Symptoms of bacterial infections are similar to those caused by viral infections.

Antibiotics cannot kill viruses. Antibiotics will not help a viral infection or stop the spread of a viral infection to others. Taking antibiotics for viral infections can increase the chance of an antibiotic-resistant infection later.

- Rest, drink fluids
- Relieve symptoms with over the counter medications
- Call your doctor if your symptoms worsen

Bacterial infections usually need to be treated with an antibiotic - medications that kill bacteria. If you are prescribed an antibiotic, follow instructions closely:

- take all the medication as directed even if you feel better
- do not share antibiotics or save them for the next time you are sick

When antibiotics are misused, bacteria can develop resistance to the antibiotics over time. Antibiotic resistance affects everyone. YOU can help keep antibiotics working!

GEDtestingService.com • GED.com

Evaluate with Questions

- What are the differences between viruses and bacteria?
- Are all bacteria harmful? Explain.
- How does the overuse of antibiotics lead to resistant strains of bacteria?
- When you get a cold, should you take an antibiotic to help you get better? Why?
- What can you do in your life to reduce antibiotic resistance?

27 GEDtestingservice.com • GED.com

Evaluate with Research

Research five solutions to antibiotic resistance. These can be ways to avoid developing and spreading resistance or possible alternatives to antibiotics. Cite your sources for each piece of information you find. Make sure to use reputable sources based on scientific facts.

Example: Overuse of antibiotics increases the chance of bacteria developing antibiotic resistance.

Puerto Rico investigates post-hurricane disease outbreak

By MICHAEL MELIA, ASSOCIATED PRESS
SAN JUAN, Puerto Rico — Oct. 11, 2017, 2:21 PM ET

Share Tweet

FILE - In this Sept. 28, 2017 file photo, people affected by Hurricane Maria bathe in water piped in from a mountain creek, in Naranjito, Puerto Rico. Four deaths in Hurricane Maria's aftermath are being investigated as possible cases of a disease spread by animals' urine, Puerto Rico's governor said Wednesday, Oct. 11, 2017, amid concerns about islanders' exposure to contaminated water. On a U.S. territory where a third of customers remain without running water three weeks after the hurricane, some became ill after turning to local streams to relieve their thirst. (AP Photo/Ramon Espinosa, File)
